The following is an examiner's statement of reasons for allowance: The art of record (considered as a whole) neither anticipates nor renders obvious a method of controlling a semiconductor dicing saw dynamically adjusting a saw cut pattern of the saw during a sawing operation based on a detected property of the dicing saw and waiting a predetermined time and/or distance before terminating the current saw cut, detecting a level of strain associated with the drive shaft of the saw to determine contact

with semiconductor wafer, detecting a level of strain and dynamically adjusting the saw cut pattern if the detected strain fall below a predefined threshold, mapping a shape based on when the saw blade is contacting the semiconductor wafer or providing a minimum saw cut length for each saw cut irrespective of the detection of contact with the semiconductor wafer together in combination with the rest of the claimed limitations set forth in the independent claim.
